The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.					
 If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 1751

DETAILED ACTION

1. Claims 15-31 are pending. Claims 1-14 have been canceled. Applicant's amendments and arguments filed 2/15/06 have been entered. Note that, the prior art rejections as set forth below are the same or in some cases, substantially the same, as the prior art rejections affirmed by the Board of Appeals in a decision rendered on 7/26/02 in case 09/086427.

Objections/Rejections Withdrawn

2. The following objections/rejections set forth in the Office action mailed 1/6/06 have been withdrawn:

The rejection of claims 1-14 under 35 U.S.C. 103(a) as being unpatentable over Zocchi (US 5,681,801) in view of Pyles (US 5,576,279) or Bolich, Jr. et al (US 5,104,646) has been withdrawn.

The rejection of claims 1-14 under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. 5,681,801 in view of Pyles (US 5,576,279) or Bolich, Jr. et al (5,104,646) has been withdrawn.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 31 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which

Art Unit: 1751

was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

With respect to instant claim 31, the specification as originally filed, provides no basis for "with the proviso that the guar is not hydroxypropyl guar" as recited by instant claim 31. While an Applicant may disclaim what they have disclosed, while the specification provides basis for ethoxylated and propoxylated guar gum, no where in the specification is the species "hydroxypropyl guar" disclosed. Thus, this is deemed new matter.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 1751

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1751

Claims 15-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zocchi (US 5,681,801) in view of Baravetto et al (US 5,980,877) or Inman (US 5,948,739).

Zocchi is relied upon as set forth above. However, Zocchi does not teach a personal cleansing composition containing hydroxypropyl guar gum or hydroxyethyl guar gum nor specifically teach a personal aqueous cleansing/conditioning composition containing an anionic surfactant, an amphoteric surfactant, a suspending material mixture comprised of xanthan gum and hydroxypropyl guar gum or hydroxyethyl guar gum and particles bearing a conditioning agent suspended in an aqueous phase in the specific proportions as recited by the instant claims.

Baravetto et al teach aqueous conditioning shampoo compositions containing a surfactant component in a shampoo with a particulate insoluble, dispersed, non-volatile conditioning agent having a dual particle size range, suspending agent, and a deposition polymer. See Abstract. The shampoo compositions comprise a detersive surfactant suitable for use on hair or skin. Suitable surfactants include anionic surfactants, nonionic surfactants, amphoteri surfactants, or mixtures thereof. The purpose of the detersive surfactant is to provide cleansing performance to the composition. See column 4, lines 60-59. The shampoo compositions further comprise a suspending agent at concentrations effective for suspending the conditioning agents. The concentrations range from about 0.1% to about 10% by weight. Suitable suspending agents include xanthan gum, carboxyvinyl polymers, etc. Other suitable

Art Unit: 1751

suspending agents may be used in the compositions, including those that can impart a gel-like viscosity to the composition, such as hydroxypropyl guar gum, etc.

Inman teaches hair conditioning shampoo compositions containing a detersive surfactant component, a silicone hair conditioning agent, water, and preferably comprising a suspending agent for the silicone conditioning agent. See Abstract. Any suspending agent can be used including xanthan gum, carboxyvinyl polymers, etc. See column 13, line 30 to column 14, line 20. Another type of suspending agent that can be used includes hydroxypropyl guar gum, starch, etc. These suspending agents are used at a level of from about 0.1% to about 10% by weight of the composition. See column 15, lines 25-40.

It would have been obvious to one of ordinary skill in the art to use hydroxy propyl guar gum in place of a portion of xanthan gum as a thickening agent in the hair cleansing/conditioning composition taught by Zocchi having the same physical parameters as the xanthan gum taught by Zocchi, with a reasonable expectation of success, because Baravetto et all or Inman teach the equivalence of xanthan gum to hydroxypropyl guar gum as thickening agents in similar hair care compositions. Note that, an express suggestion to substitute one equivalent component or process for another is not necessary to render such substitution obvious. In re Fout, 675 F.2d 297, 213 USPQ 532 (CCPA 1982). Also, it is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the very same purpose. In re

Kerkhoven, 626 F.2d 846, 850, 205 USPQ 1069, 1072 (CCPA 1980). Note that,

Art Unit: 1751

Applicant has demonstrated no criticality with respect to a mixture of xanthan gum and hydroxypropyl guar gum as the thickening agent.

Note that, it would have been obvious to one of ordinary skill in the art to use hydroxyethyl guar gum in place of a portion of xanthan gum instead of hydroxypropyl guar gum in the compositions taught by Zocchi for the same reasons set forth above, with a reasonable expectation of success, because hydroxyethyl guar gum and hydroxypropyl guar gum (as taught by Baravetto et al or Inman) have very close structural similarities and would be expected to have similar properties. A prima facie case of obviousness may be made when chemical compounds have very close structural similarities and similar utilities. An obviousness rejection based on similarity in chemical structure and function entails the motivation of one skilled in the art to make a claimed compound, in the expectation that compounds similar in structure will have similar properties. See MPEP 2144.09.

It would have been obvious to one of ordinary skill in the art, at the time the invention was made, to formulate a personal aqueous cleansing/conditioning composition containing an anionic surfactant, an amphoteric surfactant, a suspending material mixture comprised of xanthan gum and hydroxypropyl guar gum or hydroxyethyl guar gum, particles bearing a conditioning agent suspended in an aqueous phase, and the other requisite components of the composition in the specific proportions as recited by the instant claims because the broad teachings of Zocchi in combination with Baravetto et all or Inman suggest a personal aqueous cleansing/conditioning composition containing an anionic surfactant, an amphoteric surfactant, a suspending

Art Unit: 1751

material mixture comprised of xanthan gum and hydroxypropyl guar gum or hydroxyethyl guar gum, and particles bearing a conditioning agent suspended in an aqueous phase in the specific proportions as recited by the instant claims.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 15-31 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-14 of U.S. Patent No. 5,681,801 (Zocchi) in view of Baravetto et al (US 5,980,877) or Inman (US 5,948,739). Claims 1-14 of US 5,681,801 recite a personal cleansing/conditioning composition encompassing all the material limitations of instant claims 15-31 except for the inclusion of hydroxypropyl or hydroxyethyl guar gum.

Baravetto or Inman et al teach similar personal cleaning compositions which show the equivalence of xanthan gum to hydroxypropyl guar gum or hydroxyethyl guar gum as thickening agents.

Art Unit: 1751

It would have been obvious to one of ordinary skill in the art to use hydroxypropyl or hydroxyethyl guar gum in place of a portion of xanthan gum as a thickening agent in the hair cleansing/conditioning composition claimed by Zocchi having the same physical parameters as the xanthan gum taught by Zocchi with the expectation of success since Baravetto or Inman et al teach the equivalence of xanthan gum to hydroxyl propyl or hydroxyl ethyl guar gum as thickening agents in similar hair care compositions.

Note that, instant claims 1-14 of US 5,681,801 (Zocchi) in view of Pyles or Bolich, Jr. et al encompass the material limitations of instant claims 15-31.

Response to Arguments

With respect to Zocchi in view of Baravetto or Inman, Applicant once again states that Zocchi does not teach a composition containing hydroxypropyl guar gum and that Baravetto or Inman do not remedy the deficiency of Zocchi and provide motivation to one of ordinary skill in the art to use hydroxypropyl guar gum in the cleaning composition taught by Zocchi. Specifically, Applicant states that both Baravetto or Inman disclose shampoo compositions containing a silicone conditioning agent and that both references disclose several lists of compounds that may be used as suspending agents to suspend a silicone conditioning agent. In response, note that, both Baravetto or Inman are secondary references relied upon for their teaching of the equivalence of hydroxypropyl guar gum to xanthan gum in a similar cleaning composition. The Examiner maintains that there is clear motivation to use hydroxy propyl guar gum in place of a portion of xanthan gum as a thickening agent in the hair cleansing/conditioning composition taught by Zocchi having the same physical

Art Unit: 1751

parameters as the xanthan gum taught by Zocchi, with a reasonable expectation of success, because Baravetto et al or Inman teach the equivalence of xanthan gum to hydroxypropyl guar gum as thickening agents in similar hair care compositions.

With respect to instant claim 31, Applicant states that claim 31 excludes hydropropyl guar gum which is the only alkoxylated guar recited in the secondary references. In response, note that, one of ordinary skill in the art would be motivated to use another gum such as hydroethyl guar gum in the compositions taught by Zocchi because hydroxyethyl guar gum and hydroxypropyl guar gum (as taught by Baravetto et al or Inman) have very close structural similarities and would be expected to have similar properties. A prima facie case of obviousness may be made when chemical compounds have very close structural similarities and similar utilities. An obviousness rejection based on similarity in chemical structure and function entails the motivation of one skilled in the art to make a claimed compound, in the expectation that compounds similar in structure will have similar properties. See MPEP 2144.09.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any Application/Control Number: 10/716,716 Page 11

Art Unit: 1751

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregory R. Del Cotto whose telephone number is (571) 272-1312. The examiner can normally be reached on Mon. thru Fri. from 8:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas McGinty can be reached on (571) 272-1029. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
